Σ={a,Aa,Abb}, then string aAaAbbAa has _____ length.

- ▶ One
- ▶ Two
- ▶ Three
- ▶ **Four (Page 4)**

Languages generated by kleene star are always _____.

- ▶ Finite
- ▶ **Infinite (Page 7)**
- ▶ Sometimes finite & sometimes infinite
- ▶ None of the these

Let S = {aa, bb} be a set of strings then s* will have

- ▶ **Λ (Page 7)**
- ▶ abba
- ▶ aabbbaa
- ▶ bbaab

If r1 = (aa + bb) and r2 = (a + b) then the language (aa + bb)* will be generated by

- (r1)(r2)
- (r1 + r2)
- (r2)*
- **(r1)* (Page 10)**

If a language can be expressed through FA, then it can also be expressed through TG.

- **True (Page 25)**
- False
- Depends on language
- None of the above

GTG can have _____ final state.

- 0
- 1
- More than 1
- All of the given **Click here for detail**

In GTG, if a state has more than one incoming transitions from a state. Then all those incoming transitions can be reduced to one transition using _____ sign

- -
- **+ (Page 27)**
- *
- None of the given

"One language can be expressed by more than one NFA". This statement is _____.

- False
- True (Page 41)
- Depends on NFA
- None of the given

If an alphabet has n number of letter, then number of strings of length m will be

- ▶ n+m
- ▶ (n)(m)
- ▶ m^n
- ▶ **n^m (Page 6)**

a*b* = (ab)* this expression is _____

- ▶ True
- ▶ **False**
- ▶ Can't be assumed
- ▶ None of these

Above given FA can be expressed as _____

- ▶ **(a + b)* (Page 19)**

►a* + b*

► (ab + ba)*

►None of these

If a language is expressed through TG, then that language will have its RE.

►**True (Page 25)**

►False

►Depends on language

►None of these

Questions:

Q1. Point of Kleen Theory.

Answer:- (Page 25)

1. If a language can be accepted by an FA then it can be accepted by a TG as well.
2. If a language can be accepted by a TG then it can be expressed by an RE as well.
3. If a language can be expressed by a RE then it can be accepted by an FA as well.

Q2. Difference and common between NFA & DFA

Answer:- (Page 25) Click here for detail

Difference

1-In FA Finite number of states, having one initial and some (maybe none) final states. While in NFA Finite many states with one initial and some final state.

2-In FA for each state and for each input letter there is a transition showing how to move from one state to another while in NFA there may be more than one transition for certain letters and there may not be any transition for certain letters.

3-In FA □ is valid while in NFA □ is not valid.

Common

Finite set of input letters,

Q3. What is the function of mealy machine?

Answer:- (Page 60)

1's complementing and incrementing machines which are basically Mealy machines are very much helpful in computing.

The incrementing machine helps in building a machine that can perform the addition of binary numbers.

Q4. Write the first step to convert GTG to FA?

Answer:- (Page 26)

VU Insider

For more papers, go to VUInsider.com

FOR MORE PAPERS, GO TO VUINSIDER.COM

Step 1 If a TG has more than one start states, and then introduces a new start state connecting the new state to the old start states by the transitions labeled by Λ and make the old start states the non-start states.

Q5. Explain with example that how in GTG's we directly join the initial state with the final state?

Answer:- (Page 27)

Eliminate the middle state and connect the first state with the last by a single transition (include the possibility of circuit as well) labeled by the RE which is the concatenation of corresponding two REs in the existing sequence.
