Interactive software designed to improve the decision-making capability of their users

Utilize historical data, models to solve problems

Question No: 38 (Marks: 5)

How many ways are there to call a function in a program ? Explain with example

Functions do not run automatically. When the page loads, each function waits quietly until it is told to run

Calling a Function From an Event Handler

An event handler is a command which calls a function when an event happens, such as the user clicking a button.

The command is written in the format **on*Event***, where ***Event*** is the name for a specific action. Here are some common examples:

Calling a Function From Another Function

```
function doSomething() {
```

```
doSomethingElse();    // This line calls the next function
}
```

Question No: 39 (Marks: 5)

Question No: 40 (Marks: 10)

Write a JavaScript program having two functions sum and mean.

The web page will ask the user to enter five values to be added.

After taking input it will calculate the sum and mean of those values by calling sum and mean functions.

Question No: 41 (Marks: 10)

Define the following terms.

Object

A named collection of properties(data, state) & methods (instructions, behavior)

Event Handler

An event handler is a command which calls a function when an event happens, such as the user clicking a button

Local Variable

Declaring variables (using the var keyword) within a function, makes them local•They are available only within the function and hold no meaning outside of it

Scope of Variable

Defining the space in which a variable is effective is known as
defining the scope of a variable. A variable can be either local or global in scope

Array

An indexed list of elements

Question No: 31 (Marks: 1)

In programming, what is a loop?

In computer science a for loop is a programming language statement which allows code to be repeatedly executed. A for loop is classified as an iteration statement.

Question No: 32 (Marks: 1)

What are the other names of function? Any one.

Routine , procedure , sub programm

Question No: 33 (Marks: 2)

How JavaScript Arrays are heterogeneous ?

Arrays are heterogeneous in java script because at the same time stimultanously they can hold elements of multiple data types

Question No: 34 (Marks: 2)

What is the database?

Data base is a collection of organized data in a proper way that computer can quickly search for any desired data item , its an easy way of allowing of manipulation of data,they are design in such a way that access to any desired data can be identified and reached quickly and easy , they are generally consist of collection of interrelated files

Question No: 35 (Marks: 3)

Differentiate between LAN and WAN with one example of each.

Lan is a local area network where as wan is a wide area network Lan can be used in a specific areas with limited computers where as

wan can be used on computers shared by large distances
For example lan can be used on pc s or an organization located in one building but wan can be used on large scales like banks all over or in any Large communication systems

Question No: 36 (Marks: 3)

What are Trojan Horses ?

Trojen horses are a kind of cyber crime , they are v harmful to computer because they are stand alone programme and the look like what they are not like any thing amusing or not harmless like games..

Question No: 37 (Marks: 3)

Elaborate Rester Graphics with examples.

A raster graphics image, digital image, or bitmap, is a data file or structure representing a generally rectangular grid of pixels, or points of color, on a computer monitor, paper, or other display device.

To illustrate the matter further - here's the letter "J":

J

Look closely at it... Take a magnifying glass to it if you like. You see a "J", the computer sees something more like this, where '.' represents a zero and 'X' represents a one:

....X
....X
....X
....X
....X
....X
....X
X...X
X...X
.XXX.

Where you see a zero, the computer instructs its video hardware to

paint the current background color. A one calls for the current foreground color. Yes, it is actually a bit more complicated, but it all basically boils down to one bit or the other making a distinction between the colors of adjacent pixels, which together form an image.

Question No: 38 (Marks: 5)

What are the important properties, methods and event handlers of image object?

The primary use of the image object is to download an image into the cache before it is needed to display , image object can be used to create different kinds of animations or to display one of several images based on the desired requirement , in java script image object can be used to display the required pre loaded image

Properties of image object is : height , width ,hspace ,vspace , src , name border etc

Methods :none

Event handlers:on aboart , onload, onerror etc

Question No: 39 (Marks: 5)

Write the JavaScript code for the Function SumOddNumbers(maxNumber) that can add non-negative odd numbers up to maxNumber and return their sum.

```
Function sum odd numbers(maxnumber){var sum=0;
For(i=0; <maxNumbers;I++)
{
{
if(i / 2 == 1 || i == 1)
sum += i;
}

return sum;

}
```

Question No: 40 (Marks: 10)

Write a note on :

- Coding guidelines
- Guidelines for developing short programs.
- **Coding guidelines**
- • Always use semicolons to end statements
- • Indent blocks of code (2 to 5 spaces)
- • Identifiers
- • Use the camel back scheme
- • Variables: nouns
- • Functions: verbs
- • Comment Liberally
- • Make them descriptive but concise
-

Gudelines for developing short programs.

- • Read and understand the problem
- • Do you have all the required data?
- • No: Get it
- • Else assume it. State it explicitly
- • Do the design

Question No: 41 (Marks: 10)

write a note on each of the following:

a. Vector or Object-Oriented Graphics:

b. Bit-Mapped or Raster Graphics:

A:In Vector or object oriented graphic everything drawn is treated as object. objects retain their identity after they are drawon. these objects can later be moved, stretched, duplicated, deleted,etc. they are resolution independent and have relatively small file size. the examples are: swf, svg, wmf, ps

brass_ibrahim: Vector graphics is the use of geometrical primitives such as points, lines, curves, and shapes or polygon(s), which are all based on mathematical equations, to represent images in computer graphics.

brass_ibrahim: The term "vector graphics" is mainly used today in the context of two-dimensional computer graphics Virtually all modern 3D

rendering is done using extensions of 2D vector graphics techniques .Virtually all modern 3D rendering is done using extensions of 2D vector graphics techniques

B:Bit-Mapped or Raster Graphics:

Treats everything that is drawn as a bit-map
If an object is drawn on top of another, it is difficult to move just one of them while
leaving the other untouched
Changing the resolution often requires considerable touch-up work
Relatively large file size
Examples: gif, jpg, bmp

Question No: 31 (Marks: 1)

What is the function of Network Interface Card ?

Question No: 32 (Marks: 1)

In programming, what is a loop?

Ans:

In computer programming, a loop is a sequence of instructions that is continually repeated until a certain condition is reached. A loop is a fundamental programming idea that is commonly used in writing programs.

What are the advantages of multimedia presentations? Write any five.

Ans:
1.Great tool for effectively communicating ideas to an audience
2.Easy to make last minute changes
3.The undo feature encourages experimentation
4.More attractive; commanded more interest
5.May include animations, sound, video
6.Easy to catalog, store, and recall
7.Great tool for making presenter-free interactive material (e.g. self-learning tutorials)

Question No: 40 (Marks: 10)

Write down HTML and JavaScript code for the following requirements:

Declare an Array with the identifier SUBJECT having length 5.
Assign following values to the array elements:
MIS, Java, Algorithms, Databases, C++
Show all values in reverse order.

```
x= new array(5);
x[0]=”MIS”;
x[1]=”Java”;
x[2]=”Algorithms”;
x[3]=”Databases”;
x[4]=”C++”;
x.reverse();
x.sort();
```

```
for ( k = 0 ; k < x.length; k = k + 1 ) {     document.write( x[ k ] +
“<BR>”) ;
}
```
